Present systems and methods are directed to a passenger restraining system, which includes a restraint and a locking mechanism, and a lighting system, which includes a variety of light sources. At least a portion of the variety of light sources is integrated with the restraint. Furthermore, the lighting system receives an indication of a configuration of the locking mechanism, executes a first light scheme via the plurality of light sources when the indication is of an unlocked configuration, and executes a second light scheme via the plurality of light sources when the indication is of a locked configuration.
